

### **Model 800A**

Plating thickness measurements presents many problems and often requires several instruments working together in order to ensure that the finished component has been correctly coated

Our latest instrument measures coating thickness, number of coats, analyzes the metals used and the waste residues

**The instrument is fast accurate and simple to use**

And is the best solution on the market today for analyzing single or multi metal coatings and all elements involved in the coating process

**Delivery Just 7 days**

**News Release NL324**

**March 2019**

**Ask for our new catalogue describing this unique instrument plus dealer net price list**
